

COMPANY PROFILE · 2026

The engineering team behind **ambitious businesses.**

From storefronts to ERP, we design, ship and run the systems your business depends on: web, mobile, point of sale and Odoo, all under one roof.

• **Smart systems, real solutions**

WHO WE ARE

A product engineering studio for businesses done fighting their software.

We are a team of engineers, designers and product people who build and run software that businesses depend on every day. From the storefront to the back office to the customer's phone, we deliver one connected system, not a pile of disconnected tools, and we stay on to run it after launch.

WHY TEAMS PICK US

One partner, not five vendors.

Web, mobile, point of sale and ERP under one roof, built to share the same data and run long after launch. You get one team accountable for the whole system, a fixed scope you approve upfront, and weekly proof instead of vanishing months.

WHAT WE DO

Six things, done properly.

One team for the whole stack, from the storefront to the back office to the customer's phone.

01

Web platforms

Corporate sites, storefronts and customer portals that load fast, rank well and turn visitors into customers.

02

Mobile products

Flutter and React Native apps that feel native, work offline and stay in sync with the rest of your stack.

03

Point of sale

Tills that keep selling when the internet drops, then reconcile stock and cash the moment they reconnect.

04

Odoo & ERP

Implementation and custom modules that bend Odoo around your operation, not the other way around.

05

Tailored tools

Dashboards, automations and internal systems for the parts of your business no off-the-shelf product fits.

06

Cloud & integrations

Hosting, pipelines and the integrations that make payments, shipping and government portals talk to each other.

HOW WE WORK

Fixed scope, weekly proof, no vanishing months.

Step 01**Scope**

We learn your business and pin down exactly what to build, for a fixed price you approve upfront.

Step 02**Blueprint**

Screens, data model and architecture, signed off with you before we write production code.

Step 03**Engineer**

We build in weekly increments you can see and test, no black boxes, no vanishing months.

Step 04**Run**

We launch on schedule, train your team and stay on for support and improvements.

THE PLATFORM

One platform. Every branch. Real time.

The till, the back office and the customer's phone, sharing the same data the instant it changes. Sell offline and reconcile on reconnect, watch stock and cash move live across every branch, and give customers an app that stays in sync, all fed by one system instead of five that never agree.

“We came for a POS and left with a partner. A year on, they still ship improvements before we even ask.”

Operations lead · Multi-branch retail group

CLIENTS

Trusted across food, retail, education and industry.

Forty-plus businesses across food and beverage, retail, education, packaging and services rely on Code Solution every day.
